Class Game

java.lang.Object

└-[de.spareripsproduction.tinyengine.Game](#)
 └-[de.spareripsproduction.madn.client.Game](#)

All Implemented Interfaces:

[UpdateInterface](#), [RenderInterface](#)

public class **Game**

extends [Game](#)

implements [RenderInterface](#), [UpdateInterface](#)

Created by marian on 12/03/14.

Field Summary

public static final	ENV_DEV Value: dev
public static final	ENV_PROD Value: prod

Constructor Summary

public	Game()
--------	------------------------

Method Summary

static Game	getInstance()
static Game	getInstance (String environment)
Scene	getScene (String sceneName)
boolean	loadScene (String sceneName)
void	render (java.awt.Graphics2D context)
void	update ()

Methods inherited from class [de.spareripsproduction.tinyengine.Game](#)

[getWindow](#), [run](#), [setRenderer](#), [setUpdater](#)

Methods inherited from class java.lang.Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

Methods inherited from interface [de.spareripsproduction.tinyengine.graphics.RenderInterface](#)

[render](#)

Methods inherited from interface [de.spareripsproduction.tinyengine.logic.UpdateInterface](#)

[update](#)

Fields

ENV_DEV

```
public static final java.lang.String ENV_DEV
```

Constant value: **dev**

ENV_PROD

```
public static final java.lang.String ENV_PROD
```

Constant value: **prod**

Constructors

Game

```
public Game()
```

Methods

getInstance

```
public static Game getInstance()
```

getInstance

```
public static Game getInstance(String environment)
```

render

```
public void render(java.awt.Graphics2D context)
```

update

```
public void update()
```

loadScene

```
public boolean loadScene(String sceneName)
```

getScene

```
public Scene getScene(String sceneName)
```

Package

de.spareripsproduction.tinyengine

Provides the classes necessary to create an applet and the classes an applet uses to communicate with its applet context.

The applet framework involves two entities: the applet and the applet context. An applet is an embeddable window (see the `java.awt.Panel` class) with a few extra methods that the applet context can use to initialize, start, and stop the applet.

de.spareripsproduction.tinyengine Class Core

java.lang.Object

└─de.spareripsproduction.tinyengine.Core

Deprecated.

public class **Core**
extends Object

Core class should no longer be used, will be removed

Since:

2014-03-08

Author:

Thomas Hampe

Version:

1.0

Constructor Summary

public	Core() Deprecated.
--------	--

Method Summary

static void	exit (int code) Deprecated.
static void	log (String s) Deprecated.

Methods inherited from class java.lang.Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

Constructors

Core

public **Core**()

Deprecated.

Methods

log

public static void **log**(String s)

(continued from last page)

Deprecated.

log a message

Parameters:

`s` - Message to log

exit

```
public static void exit(int code)
```

Deprecated.

Exits the program

Parameters:

`code` - ExitCode

de.spareripsproduction.tinyengine

Class FontManager

java.lang.Object

└-de.spareripsproduction.tinyengine.FontManager

public class **FontManager**
extends Object

The FontManager Class is responsible loading fonts

Since:

2014-03-11

Author:

Thomas Hampe

Version:

1.0

Field Summary

public static final	FONT_ARIZONIA Value: fonts/SignPainter-HouseScript.ttf
public static final	FONT_COMIC_NEUE Value: fonts/ComicNeue-Regular.ttf
public static final	FONT_COMIC_NEUE_BOLD Value: fonts/ComicNeue-Bold-Oblique.ttf
public static final	FONT_DROID_SANS Value: fonts/SignPainter-HouseScript.ttf
public static final	FONT_PRESS_START_2P Value: fonts/PressStart2P-Regular.ttf

Constructor Summary

public	FontManager()
--------	-------------------------------

Method Summary

static java.awt.Font	getFont (String resourceRef, int fontSize)
----------------------	--

Methods inherited from class java.lang.Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

(continued from last page)

Fields

FONT_PRESS_START_2P

```
public static final java.lang.String FONT_PRESS_START_2P
```

Constant value: **fonts/PressStart2P-Regular.ttf**

FONT_ARIZONIA

```
public static final java.lang.String FONT_ARIZONIA
```

Constant value: **fonts/SignPainter-HouseScript.ttf**

FONT_COMIC_NEUE

```
public static final java.lang.String FONT_COMIC_NEUE
```

Constant value: **fonts/ComicNeue-Regular.ttf**

FONT_COMIC_NEUE_BOLD

```
public static final java.lang.String FONT_COMIC_NEUE_BOLD
```

Constant value: **fonts/ComicNeue-Bold-Oblique.ttf**

FONT_DROID_SANS

```
public static final java.lang.String FONT_DROID_SANS
```

Constant value: **fonts/SignPainter-HouseScript.ttf**

Constructors

FontManager

```
public FontManager()
```

Methods

getFont

```
public static java.awt.Font getFont(String resourceRef,  
int fontSize)
```

de.spareripsproduction.tinyengine

Class Game

java.lang.Object

└─de.spareripsproduction.tinyengine.Game

Direct Known Subclasses:

[Game](#)

public class **Game**
extends Object

Main Class for the Game, handles logic updates und rendering

Since:

2014-03-10

Author:

Thomas Hampe

Version:

1.0

Constructor Summary

public	Game (String title, int width, int height) Default constructor
public	Game (String title, int width, int height, UpdateInterface updater, RenderInterface renderer) Constructor with update und render objects

Method Summary

GameWindow	getWindow() the game window
void	run() the game loop
void	setRenderer (RenderInterface renderer) Sets the render
void	setUpdater (UpdateInterface updater) Sets the updater

Methods inherited from class java.lang.Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, toString, wait, wait,

Constructors

(continued from last page)

Game

```
public Game(String title,  
            int width,  
            int height)
```

Default constructor

Parameters:

title - of the Window
width - of the Window in px
height - of the Window in px

Game

```
public Game(String title,  
            int width,  
            int height,  
            UpdateInterface updater,  
            RenderInterface renderer)
```

Constructor with update und render objects

Parameters:

title - of the Window
width - of the Window in px
height - of the Window in px
updater - Updates the Logic
renderer - Renders the window

Methods

run

```
public void run()
```

the game loop

setRenderer

```
public void setRenderer(RenderInterface renderer)
```

Sets the render

Parameters:

renderer - is responsible for rendering

setUpdater

```
public void setUpdater(UpdateInterface updater)
```

Sets the updater

Parameters:

updater - is responsible for updating

(continued from last page)

getWindow

```
public GameWindow getWindow( )
```

the game window

Returns:

the Window

de.spareripsproduction.tinyengine

Class GameWindow

```

java.lang.Object
  |
  +- java.awt.Component
        |
        +- java.awt.Canvas
              |
              +- de.spareripsproduction.tinyengine.GameWindow
  
```

All Implemented Interfaces:

Serializable, java.awt.MenuContainer, java.awt.image.ImageObserver, javax.accessibility.Accessible

```

public class GameWindow
extends java.awt.Canvas
  
```

Responsible for the Game Window

Since:

2014-03-08

Author:

Thomas Hampe

Version:

1.0

Fields inherited from class java.awt.Component

BOTTOM_ALIGNMENT, CENTER_ALIGNMENT, LEFT_ALIGNMENT, RIGHT_ALIGNMENT, TOP_ALIGNMENT

Fields inherited from interface java.awt.image.ImageObserver

ABORT, ALLBITS, ERROR, FRAMEBITS, HEIGHT, PROPERTIES, SOMEBITS, WIDTH

Constructor Summary

public	GameWindow (String title, int width, int height) Constructor for the Game Window, should not be used, use getInstance() instead
--------	--

Method Summary

javax.swing.JFrame	getFrame ()
java.awt.Graphics2D	getGraphicsContext () Returns the context on which we draw
static GameWindow	getInstance () Singleton method with no params, should be used for getting the singleton
static GameWindow	getInstance (String title, int width, int height) Single method should be used for creating a new Window
void	repaint () Repaints the window
void	setTitle (String title) Sets the Title of the window

Methods inherited from interface `java.awt.image.ImageObserver``imageUpdate`**Methods inherited from interface** `java.awt.MenuContainer``getFont, postEvent, remove`**Methods inherited from interface** `javax.accessibility.Accessible``getAccessibleContext`

Constructors

GameWindow

```
public GameWindow(String title,  
                  int width,  
                  int height)
```

Constructor for the Game Window, should not be used, use `getInstance()` instead

Parameters:

`title` - of the Window
`width` - of the Window in px
`height` - of the Window in px

Methods

getInstance

```
public static GameWindow getInstance()
```

Singleton method with no params, should be used for getting the singleton

Returns:

Window singleton

getInstance

```
public static GameWindow getInstance(String title,  
                                     int width,  
                                     int height)
```

Single method should be used for creating a new Window

Parameters:

`title` - of the Window
`width` - of the Window in px
`height` - of the Window in px

Returns:

Window singleton

(continued from last page)

getGraphicsContext

```
public java.awt.Graphics2D getGraphicsContext()
```

Returns the context on which we draw

Returns:

the Graphics Context

repaint

```
public void repaint()
```

Repaints the window

setTitle

```
public void setTitle(String title)
```

Sets the Title of the window

Parameters:

title - new Title

getFrame

```
public javax.swing.JFrame getFrame()
```

Returns:

the frame of the Window

de.spareripsproduction.tinyengine

The Standard Timer Class

Since:

2014-03-10

Author:

Thomas Hampe

Version:

1.0

Constructor Summary

public	Timer()
--------	-------------------------

Method Summary

static long	getTime() Get current Time in milliseconds
static void	sleep(long ms) Pauses execution

Methods inherited from class java.lang.Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

Constructors

Timer

public **Timer**()

Methods

getTime

public static long **getTime**()

Get current Time in milliseconds

Returns:

(continued from last page)

current Time in milliseconds

sleep

```
public static void sleep(long ms)
```

Pauses execution

Parameters:

`ms` - milliseconds to pause

Methods inherited from class java.lang.Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

Constructors

Sprite

public **Sprite**(java.net.URL url)

Create a new sprite based on an image

Parameters:

url - The url that is the path th sprite

Methods

(continued from last page)

getWidth

```
public int getWidth()
```

Get the width of the drawn sprite

Returns:

The width in pixels of this sprite

getHeight

```
public int getHeight()
```

Get the height of the drawn sprite

Returns:

The height in pixels of this sprite

render

```
public void render(java.awt.Graphics g,  
                  int x,  
                  int y)
```

Draw the sprite onto the graphics context provided

Parameters:

- `g` - The graphics context on which to draw the sprite
- `x` - The x location at which to draw the sprite
- `y` - The y location at which to draw the sprite
